

# MOCKTAR ADJIBADE TAIROU, MBA

## SENIOR DEVOPS ENGINEER | CLOUD PLATFORM ENGINEER

Greensboro, NC | 336-398-0610 | tairou.mocktar@gmail.com | linkedin.com/in/mocktar-t-69526721b

---

### PROFESSIONAL SUMMARY

Senior DevOps and Cloud Platform Engineer with 12+ years of experience automating secure AWS and Azure infrastructure in regulated enterprise environments. Expertise in Terraform and Terraform Cloud, Kubernetes/EKS, Argo CD, Helm, GitHub Actions, Jenkins, Python, and DevSecOps. Led PCF-to-EKS modernization, built reusable cloud modules and self-service platform workflows, and reduced infrastructure provisioning from days to minutes. Experienced supporting AI/ML workloads, Databricks, production releases, observability, and security remediation across distributed remote teams.

### TECHNICAL SKILLS

**Cloud & IaC:** AWS, Azure, Terraform, Terraform Cloud, CloudFormation, Ansible, reusable modules, Sentinel, policy as code

**Containers & GitOps:** Kubernetes, Amazon EKS, Docker, Helm, Argo CD, OpenShift, ingress, autoscaling, RBAC

**CI/CD & DevSecOps:** GitHub Actions, Jenkins, GitLab CI, Azure DevOps, SonarQube, Artifactory, Checkov, tfsec, Delinea

**Automation & Observability:** Python, Bash, PowerShell, REST APIs, Datadog, Grafana, Prometheus, CloudWatch, Azure Log Analytics

**Platforms & Data:** Backstage, Databricks, MongoDB Atlas, EC2, ECS/Fargate, Lambda, RDS, EventBridge, SQS, VNET, Private Link

### PROFESSIONAL EXPERIENCE

---

#### Senior DevOps Engineer / Application Development Advisor

Mar 2024 - Present

Cognizant | Remote

- Lead cloud modernization and production delivery across AWS and Azure, migrating enterprise applications from Pivotal Cloud Foundry to Amazon EKS through Argo CD, Helm, Kubernetes, and GitOps patterns across development, QA, and production.
- Engineer CI/CD pipelines with GitHub Actions and Jenkins, integrating SonarQube, Artifactory, Checkov, tfsec, and Infracost to enforce automated quality, security, compliance, artifact, and environment-promotion controls.
- Standardize EKS deployment patterns for ingress, autoscaling, secrets, resource controls, and health probes; resolve non-root execution, quota, HPA, readiness, liveness, and rollout failures affecting production workloads.
- Build Terraform-managed infrastructure for AI/ML services, including EKS namespaces, service accounts, IAM roles, PrivateLink connectivity, ingress paths, RBAC, and Delinea-managed secrets.
- Support scalable Kubernetes workloads and Databricks workspaces for a Machine Learning team, including cluster provisioning, sizing, access administration, release support, and operational troubleshooting.
- Automate Azure network and identity operations with Python, Bash, REST APIs, and Azure CLI; configure Azure Log Analytics and CloudWatch monitoring to support KPI tracking and root-cause analysis.

#### Cloud DevOps Architect

Mar 2022 - Mar 2024

Omnicom Media Group | Remote

- Designed and published 15+ reusable Terraform Cloud modules for AWS and Azure services, including databases, Event Hubs, Service Bus, Logic Apps, Container Apps, VNET, Data Factory, Databricks, Cosmos DB, S3, and EC2.
- Reduced configuration errors by 40% by embedding private endpoints, diagnostic settings, Sentinel policies, tag governance, drift detection, encryption, and identity controls into reusable infrastructure modules.
- Architected an Internal Developer Platform on Backstage, connecting schema-validated scaffolder templates to Terraform Cloud APIs for policy-controlled, self-service AWS and Azure provisioning.
- Reduced infrastructure provisioning from days to minutes through an automated workflow spanning catalog requests, template rendering, Terraform Cloud execution, approvals, and software catalog registration.
- Established module governance, security baselines, versioning, documentation, and onboarding standards adopted by global engineering teams.

## PROFESSIONAL EXPERIENCE, CONTINUED

---

### DevOps Engineer

Jan 2020 - Mar 2022

*Annalect | Remote*

- Built and operated AWS application platforms across Amazon EKS, ECS/Fargate, EC2, Lambda, EventBridge, and SQS, supporting containerized, serverless, and event-driven production services.
- Owned platform reliability, capacity, scaling, health checks, observability, incident response, and root-cause resolution across compute, containers, and serverless components.
- Standardized CI/CD delivery with Jenkins, Terraform Cloud, and GitLab CI while enforcing least-privilege access and auditable permissions across AWS services and delivery tooling.
- Partnered with application teams from architecture through production, embedding networking, resilience, monitoring, security, and operational requirements early in the delivery lifecycle.
- Produced technical documentation and led knowledge-transfer sessions enabling engineering teams to self-serve on platform tooling and operational procedures.

### DevOps Engineer

Jan 2017 - Jan 2020

*Infostretch | Remote*

- Executed chaos engineering experiments for Fidelity Investments with Gremlin across Kubernetes, EC2, and virtual machines, using Datadog, Grafana, and CloudWatch for real-time performance analysis.
- Engineered secure CI/CD pipelines with GitHub Actions and Jenkins, incorporating secrets management, compliance controls, and automated deployment workflows.
- Developed Ansible playbooks for repeatable infrastructure provisioning across hybrid-cloud environments and troubleshoot distributed microservices through log and performance analysis.

### Linux System Administrator

Aug 2013 - Jan 2017

*OCEANIX SARL | Benin*

- Administered Red Hat and Ubuntu servers, LAMP stacks, HAProxy load balancers, and Apache web servers supporting enterprise applications.
- Automated user access, permissions, network configuration, patching, and operational tasks with Bash and Cron while maintaining availability and security compliance.

## SELECTED TECHNICAL LEADERSHIP

---

- Guide engineering teams on Infrastructure as Code, GitOps, Kubernetes operations, platform standards, and production troubleshooting across multi-geo remote environments.
- Evaluate platform architecture trade-offs and translate security, compliance, networking, and operational requirements into reusable engineering patterns.

## EDUCATION & LANGUAGES

---

### MBA, Université d'Abomey-Calavi (UAC), Benin

Bachelor's in Management, Université d'Abomey-Calavi (UAC), Benin

Languages: English, Fluent | French, Fluent
